## 1. General

### 1.1. How can I request a new feature or get some support?

Using the mailing lists is the best way. VFSJFileChooser is still not a one man effort. Using the mailing lists or the forums allows the other members of the team to see it and maybe to provide a quick solution.

### 1.2. Why VFSJFileChooser?

VFSJFileChooser was started to provide remote file system browsing to [XPontus XML Editor](#).

### 1.3. Where is the roadmap??

The roadmap is established according to the reported bugs. VFSJFileChooser tries not to be bloated... The initial goal was to provide filesystem abstractions atop *javax.swing.JFileChooser*.

### 1.4. How do I transfer remote files?

VFSJFileChooser is not designed to be a file transfer tool. There were already file transfer tools which support many protocols, such as JFTP, JCommander

### 1.5. Hum... I want the code, how to get the code?

Please see the [subversion instructions](#) and make sure that you grab the **jdk5** branch in the subversion repository.
